- Respiratory protection: Not necessarily with good ventilation, however, use a filter AX when ventilation is inadequate!
- Protection of hands:
 Use gloves of stable material (e.g. Nitrile) if necessary tricoted to improve the wearability.

Protective gloves

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.

Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

- · Material of gloves
 - The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
- Penetration time of glove material
 The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed.
- · For the permanent contact gloves made of the following materials are suitable: nitrile rubber;
 - recommended glove thickness> 0.45mm. permeability / permeation time:> 480 min. according to EN 374.
- · As protection from splashes gloves made of the following materials are suitable:
 - Cloropene; handglove thickness >0.7mm, penetration time >60min. according EN374.
 - Nitrilrubber; handglove thickness >0.3mm, penetration time >60min. according EN374.
- · Eye protection:

Tightly sealed goggles
