**Protective gloves**

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.

Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

- Material of gloves  
The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
- Penetration time of glove material  
The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
- For the permanent contact gloves made of the following materials are suitable:  
PE gloves, recommended film thickness:> 0.7 mm.  
For a touch of 30-120 minutes: gloves made of PVA, recommended material thickness: 0.7 mm.
- For the permanent contact of a maximum of 15 minutes gloves made of the following materials are suitable:  
Butyl rubber, BR
- As protection from splashes gloves made of the following materials are suitable:  
Gloves of nitrile rubber, recommended material thickness:> 0.3 mm,  
neoprene or butyl rubber, recommended material thickness:> 0.4 mm.
- Eye/face protection
